Digital Forensics Report

Lab Assignment I – OPERATION DEEPFISH – Stage I

Group: Group number

Student 1: Name 1 Number 1

Student 2: Name 2 Number 2

Student 3: Name 3 Number 3

1 Acquired artifacts

Name	Source / Provenance	SHA-256 Value

2 Report of all findings (Investigation and Evidence Analysis)

Document the relevant findings of the investigation.

3 Analysis of relevant findings

3.1 Nature of the incident

(a) Did you find evidence that the reported activity was part of a scam? If so, describe the nature of the scam and reconstruct how it was conducted. (b) Did you uncover any additional concealed artifacts during your investigation? If so, explain how these artifacts were concealed and describe the methodology used to recover them. For both (a) and (b), support your conclusions with the relevant evidence identified during the investigation.

3.2 Interpretation of the evidence

Focusing on the recovered concealed material, can you identify relationships among the recovered items, explain what they may represent, and formulate a supported hypothesis about their significance to the case? Clearly identify which parts of your interpretation are established by evidence and which remain inferential.

3.3 Attribution and next investigative steps

Does the available evidence support any conclusion about the identity of the person or persons responsible for the scam or any other suspicious activity uncovered? Discuss the strengths and weaknesses of the attribution evidence you have found. Provide recommendations to SI regarding the next investigative steps, including any additional evidence that should be preserved or obtained before further action is taken.

4 Use of Artificial Intelligence

Did you use Artificial Intelligence (AI) tools in the preparation of this report? If so, identify the tool(s) used and briefly state the purpose(s) for which they were used.
